

Dust Control Mats

Up to 500lb of dust, glass fragments and grit collects in busy entrances to buildings every year, and 70 per cent of this is walked into the buildings on people's shoes. The damage caused to floor areas by this dust and dirt can be minimised by fitting dust control mats inside entrances, or in other areas experiencing a high volume of traffic. Our safe, cost-effective and attractive mats can each hold up to an astonishing 5.38 litres of water and 3.87kg of dirt per square metre.

Some benefits of using our dust control mat service

Dust control mats are extremely cost-effective compared to the cost of cleaning and maintenance in areas where they are not installed. Floors are kept clean and dry because dirt, dust and moisture are retained in the thick pile of the mat. Soiled dust control mats are collected weekly by our driver and replaced with freshly laundered ones. Mats laundered weekly are more efficient, look better and present a good company image. Dust control mats also encourage people to wipe their feet, thus reducing the amount of dirt entering your premises.

Best locations for dust control mats

Dust control mats can be used effectively in all parts of a building where people congregate - for example, hotel and business reception areas, shop doorways, adjacent to vending machines, and factory floor areas where people stand to work. Dust control mats can also be used to eliminate slippery areas in the food serveries of cafés and canteens.

Dust control mats could cost you nothing with the savings in cleaning and maintenance costs!

How the service works

We deliver mats to your establishment and replace them with clean ones on a weekly basis. There is no capital outlay during any part of the term contract set up. All you pay is a small weekly hire charge.

Personalised logo mats

We also offer a personalised logo mat service. Your corporate image or logo can be printed on to a dust control mat, enhancing the image of your business.
